AIS830

ABB Ability™ System 800xA® hardware selector

Select I/O is an Ethernet networked, single channel granular I/O system for the ABB Ability™ System 800xA automation platform. Select I/O helps decouple project tasks, minimizes the impact of late changes, and supports standardization of I/O cabinetry ensuring automation projects are delivered on time and under budget. A Signal Conditioning Module (SCM) performs the necessary signal conditioning and powering of the connected field device for one I/O channel.

The AIS830 is an Analog Input Signal Conditioning Module for temperature measurements via RTD/TC/mV.

Features and benefits

- Analog input for 2-wire, 3-wire, or 4-wire RTD input or TC input with cold Junction Compensation
- Can be used in hazardous areas
- 16 bit A/D converter resolution
- Channel to channel galvanic isolation
- Software filter configurable through parameters
- Protected against wrong wiring
- Configurable software filter
- Diagnostics:
 - Loop supervision (open circuit and short circuit)
 - Communication supervision
 - Internal power supervision
- Single loop granularity each SCM handles a single channel
- Supports hot swap
- Mechanical locking slider which turns off field device power and/or output before removal
- Field disconnect function which can galvanically separate the field loop wiring from the SCM during commissioning and maintenance
- All SCMs have electronic current limitation
- Mechanical keying to prevent insertion of wrong module type after commissioning
- 24V DC powered through Modulebus
- Configurable through parameters
- LED indicators on the SCM indicate the operational state of the module.

Detailed data		
Supported field devices	2-wire, 3-wire	
Supported field devices RTD	4-wire RTD input Pt100, Pt200, Pt500, Pt1000, Ni100, Ni120, Ni200, Ni500, Ni1000, Ni1200, Cu10 and R (0 to 4000 Ω)	
Supported field devices TC	B, C, D, E, J, K, L, N, R, S, T, U and -30 mV to +75 mV	
Isolation	Galvanic isolation to system and between each channel (including field power). Routine tested at factory with 3060 VDC.	
Field power	Current limited	
Accuracy	0.1 %	
Resolution	16-bit D/A converter	
Diagnostics	Loop supervision (short circuit and open circuit) Communication supervision Internal power supervision	
Calibration	Factory calibration	
Power dissipation	0.4 W	
Installation in Hazardous Area/Locations	Yes/Pending	
IS barrier	No	
Field Input Robustness	±35 V between all terminals
